

HS MIXER AMPLIFIER FOR STREAMING, PAGING & TONES

The HS series features priority mode detection which allows channels to be muted when audio is detected on channels 1–3. This can be used for applications like paging where background music is muted while the announcement occurs.

The priority section consists of three DIP switches and four POTS to configure the operation.

STREAMING

Background music and advertisements streamed from head office

BGM VIA BLUETOOTH OR SD CARD

Programmable Bluetooth 5.1 including, name/PIN and security settings. SD Card with MP3 files controlled from front panel
